

Lesson plan and visual organizer

I thought that this program would help students learn how to find the least common denominator visually. I also like how the lesson has links that lead to explanations of the terms. I thought that this lesson would work better in steps.

- 1) Comparing fractions (Least common denominator)
See <http://visualfractions.com/Compare.html>
- 2) Next: review adding like fractions
See <http://visualfractions.com/AddEasy.html>
- 3) Now learn how to add unlike fractions
See <http://visualfractions.com/AddUnlike.html>

Visual Organizer

I decided to create a simple exercise with Kidspiration. The child must add pie fractions and then draw a line to the correct answer. Please see attached lesson in my e-mail.
