

Prepare both a PowerPoint and an Excel project around the theme Cybersecurity. Both must be “interactive” and require user participation; they must both expect input (i.e., data entry, or a “click”) and return feedback to the user (such as a pop up that says great job).

### PowerPoint

- At minimum 10 interlinked slides.
- Use animation of slide components

### Excel project

- Utilize 3-4 methods learned today
  - Conditional formatting
  - Data validation
  - Logicals (IF, OR, AND, NOT)
  - Formatting contents (numeric, string, date, significant digits)
  - Formatting cells (color, size, borders)
  - Hiding and locking cells
  - etc.

Make sure you save your work to your student folder
